INTERNSHIP BRIEF · REMOTE-FIRST

Backend Engineering Intern

Database, Maintenance & Scalability · for two live SaaS products: **Civil Suits** and **Homigo**

ORGANISATION **Promenix Softech LLP, Pune**	REPORTS TO **Manoj D., Partner (owner of both products)**
WORK MODE **Work from home, with occasional office days in Pune**	DURATION **3 months, extendable to 6 months**
TIME COMMITMENT **20–25 hours per week, flexible**	CORE HOURS **11:00 AM – 1:00 PM IST, Monday to Friday**
OPENINGS **1–2 interns**	ELIGIBILITY **Final-year students or recent graduates (BE/BTech, BCA, MCA, BSc CS/IT)**

The role in one line: keep the databases and backends of our two products healthy, fast and ready to grow. Manoj owns the product, architecture, clients, releases and production systems. The intern owns well-defined maintenance, database and scalability tasks, reviewed and merged by Manoj.

01 About the products

CIVIL SUITS · CS

Legal-tech SaaS for bank-recovery suits

Helps advocate offices turn scanned bank documents into court-ready suit papers: scan intake and OCR, data review, drafting from approved templates, maker-checker approval and e-filing bundles. Multi-office (multi-tenant) with strict data isolation and an audit trail.

Next.js 16 · TypeScript · Supabase (PostgreSQL, Auth, Storage, RLS) · Node.js document worker (Docker, LibreOffice, OCRmyPDF) · Vercel

HOMIGO

Rental platform for workers and families

Rooms on rent around Shikrapur, Ranjangaon MIDC and Shirur (Pune Rural), with verified owners and online police tenant verification. Three user groups share one platform: tenants, owners and police, each with its own access rules.

Next.js 16 web · Expo (React Native) mobile app · Supabase (PostgreSQL 17 + PostGIS, phone OTP, Storage, RLS) · Deno edge functions · 7 languages

02 Scope of work

Common to both products

Database	Write and review migrations; add and tune indexes; read query plans (*EXPLAIN ANALYZE*) and fix slow queries; keep row-level security (RLS) tests passing and add tests for new rules; review the data model for growth.
Maintenance	Handle dependency-update pull requests (Dependabot); keep CI green; fix assigned bugs; review error logs on staging; keep README and technical docs current.

Scalability	Load-test key flows on staging; add pagination, caching or batching where data grows; track database and storage growth; propose capacity changes in writing.
Reliability	Run backup and restore drills on staging; check scheduled jobs and queues; write short runbooks for what you fix.

Product-specific focus

CIVIL SUITS (CS)	HOMIGO
• Multi-tenant PostgreSQL: office-level isolation and its RLS test suite • Approval-workflow and lifecycle rules enforced in the database • Audit-log integrity checks • Document job queue: throughput, retries and failure monitoring • Document worker performance (DOCX → PDF/A, OCR) on staging • Usage and billing queries; data-retention jobs	• PostGIS map search: spatial indexes and query speed as listings grow • Room and property search filters; listing data quality • RLS rules for tenants, owners and police, and their pgTAP tests • Supabase edge functions (Deno): maintenance and monitoring • RPC performance for the mobile app • Storage growth for photos and KYC documents (access rules unchanged)

Outside the intern's scope (handled by Manoj)

- Product decisions and new features (unless assigned)
- Client, bank, owner or police communication
- Production deployments and releases
- Access to real customer or tenant data
- Secrets, API keys and production settings
- Security policy, pricing and billing decisions

03 Access and working environment

Interns work in a **separate intern workspace**, not on the live systems. Access is limited to what the work needs and is removed on the last day.

What the intern gets

- A separate intern dashboard: staging copies of both products with **synthetic (fake) data only**
- GitHub access through pull requests; every change is reviewed and merged by Manoj
- A task board with clearly written tasks and acceptance criteria
- Read-only monitoring for the staging environments

What the intern does not get

- Production databases or dashboards
- Service keys, API keys or passwords
- Real client, borrower, owner or tenant data
- Rights to deploy or merge to the main branch

04 Working hours and mode

Weekly hours	20–25 hours, planned by the intern around college schedule
Core hours	Online on chat 11:00 AM – 1:00 PM IST, Monday to Friday

Daily update	Three lines by 7:00 PM: done today, plan for tomorrow, blockers
Weekly review	One 30–45 minute video call with Manoj: code review and next tasks
Office days	Occasional, in Pune: onboarding day, monthly review or a planned working session, with at least 3 days' notice
Equipment	Own laptop and internet; laptop protected by password and screen lock; two-factor login on GitHub
Leave and exit	Inform in advance for exams or leave; two weeks' notice to leave early, with a handover of open work

05 What we expect from the intern

- **Ownership of assigned tasks:** finish what you pick up, or say early if you cannot.
- **Quality:** every change comes with a test; CI must be green before review.
- **Communication:** ask after two hours of being stuck, not two days.
- **Confidentiality:** no code, data or screenshots outside the workspace, including public GitHub and AI tools. An NDA is part of the internship agreement.
- **Code ownership:** work done during the internship belongs to Promenix Softech LLP.
- **Learning:** read the project documentation in week 1 and follow the team's conventions.

Skills

Required	JavaScript or TypeScript; Node.js basics; SQL (joins, indexes); Git and GitHub (branches, pull requests); reading English technical documentation
Good to have	PostgreSQL; Supabase; Next.js; writing tests; Linux and Docker basics; PostGIS
We will teach	Row-level security, migrations and triggers; our testing setup; legal-document and rental-domain rules; data-protection practices

06 What the intern gets in return

Internship certificate
Issued on successful completion, stating the role, duration and the work done (sample below).

Letter of recommendation
For interns whose work meets the expectations above, signed by the Partner.

Real production experience
Work on two live SaaS products: databases, security rules, testing and scaling. This can be described in the resume and in interviews.

Mentorship and code review
Weekly one-to-one review with the product owner, with written feedback.

Flexible remote work
Work from home around the college timetable, with a short daily overlap.

Stipend
Performance-based; amount discussed and confirmed in the offer letter.

Paid role opportunity
Strong interns get first consideration for a paid position as the products grow. This is not guaranteed.

Portfolio summary
A short, approved description of your contribution that you may share publicly (no code or data).

CERTIFICATE OF INTERNSHIP

PROMENIX SOFTECH LLP · FUTURE READY

This is to certify that

[Intern Name]

has successfully completed an internship as **Backend Engineering Intern (Database, Maintenance & Scalability)** at Promenix Softech LLP, Pune, from **[start date]** to **[end date]**, working remotely on the Civil Suits and Homigo platforms. During this period the intern worked on database migrations, query performance, security-rule testing and system maintenance, and showed [sincerity, technical ability and good communication].

Date: [date] · Pune

Manoj D., Partner
Promenix Softech LLP

SAMPLE — FINAL WORDING DEPENDS ON THE WORK COMPLETED

07 Selection process

1
Apply
Resume and GitHub profile (or any code you have written).

2
Intro call
30 minutes: background, availability and a few basic questions.

3
Take-home task
3–4 hours: a small database table with access rules and a test that proves them.

4
Offer
Offer letter and internship agreement (NDA, code ownership, data rules).

Women candidates are especially encouraged to apply. The role is remote-first with flexible hours.
